Research / Project Title:

LEARNLENS – A WEB-BASED MOBILE PLATFORM FOR AUTOMATED TEST EVALUATION FOR TERTIARY EDUCATION DEPARTMENT AT DE LA SALLE ARANETA UNIVERSITY

Authors / Proponents:

Eric Bernard Rodulfo Tablizo / Mark Vincent M. Cristobal

Program:	Contact Number/s:	Email Address:
Bachelor of Science in Computer Science	09683053091 (Eric) 09617522182 (Mark)	

School Year / Term Enrolled:

Thesis 1	2025 - 2026 / 1st Trimester
Thesis 2	2025 - 2026 / 2nd Trimester

Brief description of research

This research centers on the creation and evaluation of LearnLens, an AI-based platform designed to automate the grading of handwritten exams at De La Salle Araneta University. It aims to improve the accuracy and efficiency of grading various answer formats, such as multiple choice and true or false. Utilizing a tech stack that includes a Next.js/React frontend, Express.js backend, and a Python AI engine for handwriting recognition, the development follows Agile methodology for iterative progress. The study's objectives include developing the platform for four colleges, testing its accuracy through User Acceptance Testing, and assessing usability with faculty using the Computer System Usability Questionnaire. LearnLens seeks to streamline grading, reduce errors, and provide quicker student feedback.
