Intelligent paper marking system based on machine learning algorithm

Abstract

The invention discloses an intelligent paper marking system based on a machine learning algorithm. The paper marking system comprises an answer sheet which is used for receiving a user who selects to answer on an answer sheet and shoot and upload an answer result, or answering on an electronic device in handwriting mode and upload the answer result; the test paper handwritten answer note recognition module is used for recognizing the handwritten answer of a semantic vector, and comprises a character direction recognition algorithm and a handwritten handwriting recognition algorithm; the answer evaluation module for dividing the answer semantic vector into objective questions and subjective questions for scoring by using a machine learning technology; the keyword extraction module comprises a keyword comparison algorithm and is used for extracting keywords and a keyword sequence in subjective question answers and preliminary comparing the keywords with keywords of correct answers. The online test question answering and scoring process is more intelligent and efficient.
